PRELIMINARY SPECIFICATION
BIPOLAR ANALOG INTEGRATED CIRCUIT
μPC1378H

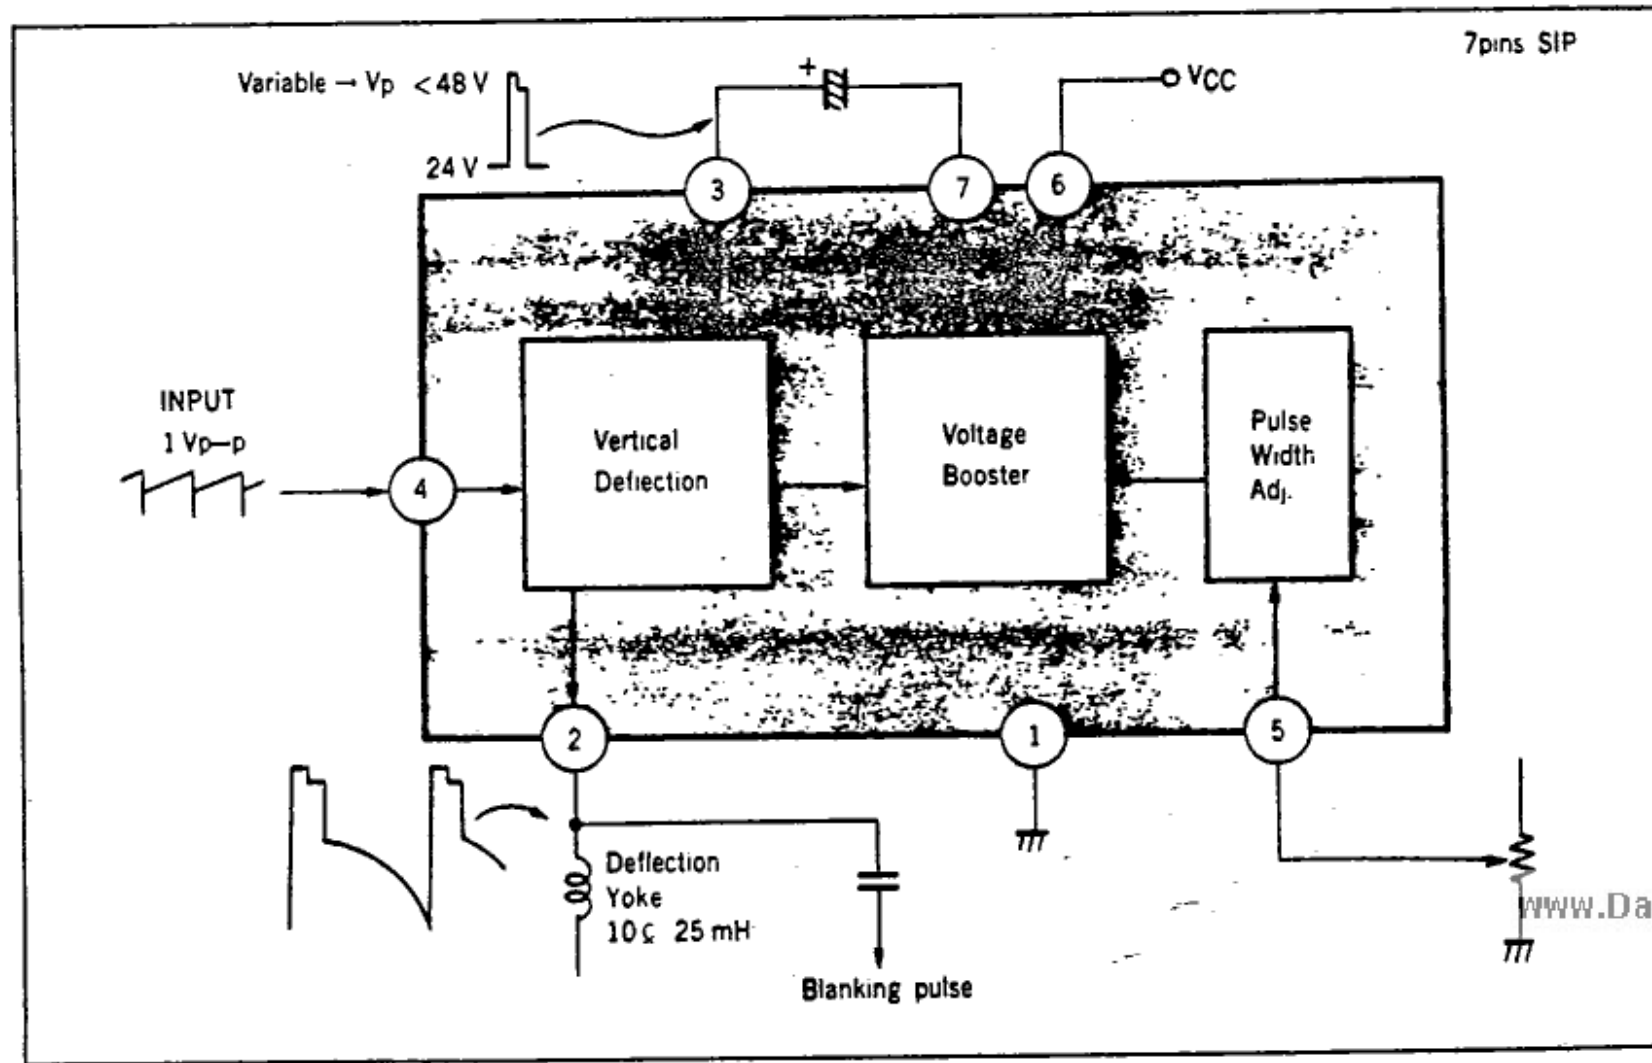

VERTICAL DEFLECTION CIRCUIT OF COLOR TV

The μPC1378H is a vertical deflection circuit suitable for color CRTs from 9 inches 90° deflection angle to 20 inches 100° deflection angle. It is available for any color TV using IC or discrete components in the vertical ramp generator.

FEATURES

- The voltage booster circuit realizes particular high efficiency (24 V, 170 mA at 20 inches 100 degrees deflection angle set).
- Able to couple with any ramp generator, as it needs only ramp signal.
- Blanking pulse width is variable with an external bias circuit.
